1. SOFT TISSUE MANAGEMENT

New Laser Technology Designed For the Way You Practice

Introducing SOL - The Portable Diode Laser

SOL® delivers true portability, power and precision, along with enhanced ergonomics, simple interface, and a high-contrast aiming beam designed to make laser dentistry easier than ever. It also happens to be incredibly affordable.

Great curves. Outstanding performance. Unbeatable value. SOL is the most attractive desktop laser in dentistry today... and it's from DenMat.

SOL is the ideal device for both entry-level and experienced laser users, delivering all the power and essential features you demand in a laser, but a fraction of the price. SOL combines true portability and superior precision at a value that no other laser can match. Whether you're upgrading your arsenal, arming your Hygiene team, or simply seeking your first diode, look no further than SOL.

Every SOL laser is manufactured in California to the highest of quality standards and backed by a **2-year warranty**.

Applications:

- Excision and incision of biopsies
- Hemostatic assistance
- Treatment of aphthous ulcers
- Gingival incision and excisions
- Gingivectomies
- Gingivoplasties
- Gingival troughing
- Gingival recontouring
- Tissue retraction for impressions

- Oral papillectomies
- Sulcular debridement
- Sulcular tissue removal
- Removal of granulation tissue
- Frenectomies
- Abscess incision and draining and excisions
- Operculectomies
- Removal of fibromas
- Soft tissue crown lengthening
- Vestibuloplasties

2. LESION DETECTION >> Sapphire Plus Lesion Detection

As the front line in the fight against oral cancer, you need the best tools to help protect your patients from this deadly disease. Sapphire Plus Lesion Detection (LD) is that tool. If you're not using Sapphire Plus LD when screening for oral lesions, you might not be seeing *everything*.

Sapphire Plus LD provides enhanced visual information so you can better detect and diagnose the presence of cancer or pre-cancer, which is why Sapphire Plus LD should be a routine part of the complete visual and physical exams you perform in your practice.

- Clinically proven technology for early detection of oral lesions¹
- Pays for itself in the first month!
- High power output for enhanced visualization
- Find lesions that aren't visible under white light¹
- Potential to save lives through early detection
- Superior optics bring examinations closer for enhanced viewing
- Easily administered during routine checkups
- HPV increases the need for screening young, non-smoking patients
- Attachable Canon® G11 digital camera - improve patient records and help protect yourself from malpractice

Sapphire Plus Lesion Detection Has Everything Your Practice Needs

Orasoptic DK by Kerr	✓	✓				

Lesions that didn't look suspicious but turned out to be cancer

Lesion that was to be biopsied and satellite lesions were discovered outside the parameter of biopsy

When cancer is discovered late, survival rates are as low as 28%; when it's discovered early, survival rates are as high as 82%.²

Under examination with Sapphire Plus LD, normal tissue appears green while dysplasia shows up as a dark area, exposing potential suspicious lesions that may not have been apparent under incandescent light.

Human papillomavirus (HPV) has been linked to oral cancer cases in young, non-smoking individuals with low levels of alcohol consumption.³

With effective curing for restorations, efficient whitening, potentially life-saving lesion detection, Sapphire Plus Lesion Detection could be one of the most productive and rewarding pieces of equipment in your practice.

Product	List
Lesion Detection Scope and Camera	

Failure to diagnose oral cancer is the second highest cause of dental malpractice in the US, with awards costing practices upwards of \$1 million.⁴

Documentation with the compatible digital camera provides greater protection for your practice and better communication, accuracy and efficiency when referring patients for biopsy.

Incorporate the life-changing, practice-building potential of Sapphire Plus Lesion Detection in your practice!

2. LESION DETECTION >> VELscope

The VELscope Vx® is the world-wide leader in discovering oral tissue abnormalities

VELscope Vx provides the most powerful technology available for assisting in the discovery of oral mucosal abnormalities, VELscope Vx plays a key role in the early discovery of such abnormalities, which can be critically important in the fight against oral cancer.

Benefits Patients, Clinicians and Practice

When used as an adjunctive aid in combination with traditional oral cancer examination procedures, VELscope facilitates the early discovery and visualization of mucosal abnormalities, including oral cancer. In one or two minutes, with no rinses or stains required, a VELscope system examination helps healthcare professionals assess their patients' overall oral health.

Over 10 million Velscope examinations have been held and the product is backed by more clinical research than any other fluorescence screening device on the market. For more information, please click on the "Research" tab above.

3. CURING & BLEACHING LIGHTS >> **Sapphire Plus Plasma Arc Curing Light**

Creating brilliant, white smiles with new Power Conversion Technology

Sapphire Plus generates and delivers maximum curing and whitening power to the restoration with the new Power Conversion Technology. This power train forms a coherent beam of light for the fastest curing and hardest composites no matter the distance. Or, with the patented Whitening Crystal, gently illuminate both arches for hands-free whitening to achieve noticeably whiter teeth in only 30 minutes or less with the LUMIBrite Chairside Whitening System. No other light has the remarkable performance of the Sapphire Plus, and independent research proves it.

Sapphire Plus has been proven #1 for composite hardness in just 5 seconds when compared to other popular lights using recommended curing times. Fast and complete curing is all about getting the greatest total energy to the restoration. Independent research at a leading university shows that the Sapphire Plus got it right! Sapphire delivers the greatest total energy in just 5 seconds to produce the hardest top and bottom restoration surfaces.

Sapphire delivers more total energy and better polymerized restorations than other lights.

**Power Conversion Technology in Action-
Maintaining Power as Distance Increases**

With easy and safe patient set up, the Sapphire Plus allows for the best in dentist-assisted whitening and is proven to whiten teeth up to 86% more than just whitening gel alone. The greatest whitening is achieved with the LUMIBrite Chairside Whitening System, gently whitening in 30 minutes or less.

- Curing restorations
- Placing LUMINEERS
- Full mouth bleaching
- High speed performance with 3-5 second curing
- Place LUMINEERS up to 50% faster
- Patented dual-arch, hands free whitening
- Less stress, more profits

3. CURING & BLEACHING LIGHTS >> FLASHlite 2.0

Use the compact and durable FLASHlite 2.0 for everyday needs such as curing liquidam or small restorative procedures.

- Compact and cordless design for curing on the go.
- Advanced lithium-ion battery for hours of hassle free operation.
- High-quality LED bulbs that cure all CQ materials quickly and efficiently.
- Ergonomic Pen-Style construction to minimize clinician strain.

Technical Specifications

- Average Output of 1,100 mW/cm²
- Total power of 450 mW
- Battery: Lithium-ion
- Wavelength Range: 460-480 nm
- Light Intensity: = 1100 mW/cm² ± 400
- Total Run-Time with Fully Charged Battery: 25 mins
- Weight: 3.7 oz.
- Operating Temperature: 15° C- 32° C (55°-104° F)

Dimensions

- Diameter: .86 in/ 22 mm
- Length: 7.8 in/ 198 mm
- Tip Diameter: 7.2 mm

AC/DC Wall Plug Adapter- Class II

- Input Voltage: 100-240 V ~/ 50-60 Hz/ 600 mA
- Output Voltage: 9V=/ 2.0A max.

Charger Base with Built-In Radiometer- Class II

- Time to Charge Discharged Battery: 4.5 hours"

3. CURING & BLEACHING LIGHTS >> FLASHlite Magna 4.0

Still the same small and lightweight design, FLASHlite Magna 4.0 is now powered by a new LED engine that delivers advanced beam collimation. Proprietary optics reduce divergence of the beam to maximize curing power in deep preps, with more focused, more powerful and more effective curing.

- Large beam area to cure a greater surface area saving chair time.
- Compact and cordless design for curing on the go.
- Advanced lithium-ion battery for hours of hassle free operation.
- 10,000 hour LEDs that cure all CQ materials quickly and efficiently.
- Ergonomic Pen-Style construction to minimize clinician strain.

FLASHlite Magna 4.0's proprietary optics reduce the beam divergence often experienced other lights, achieving maximum curing effectiveness in deep preps.

- **Harder Composites**
- **Increased Bond Strength**
- **Increased Longevity of Restoration**
- **Less Sensitivity**
- **Decreased Marginal Washout**
- **Reduces secondary caries**

Technical Specifications

- Battery: Lithium-ion
- Wavelength Range: 420-490 nm
- Light Intensity: = 1300 mW/cm² ± 200
- Total Run-Time with Fully Charged Battery: 120 minutes
- Weight: 3.7 oz.
- Operating Temperature: 15° C- 32° C (55°-104° F)

Dimensions

- Diameter: .86 in/ 22 mm
- Length: 8.6 in/ 219 mm

AC/DC Wall Plug Adapter- Class II

- Input Voltage: 100-240 V ~/ 50-60 Hz/ 600 mA
- Output Voltage: 9V=/ 2.0A max.

Charger Base with Built-In Radiometer- Class II

- Time to Charge Discharged Battery: Max 5 hours

4. PERIOPTIX - DENTAL LOUPES >> PeriOptix - Dental Loupes

We are proud to announce the acquisition of PeriOptix, Leading Provider of Magnification and Illumination Technologies. As part of this acquisition, we plan on taking a phased approach to integration. In the first phase, PeriOptix will remain mostly independent, handling all sales orders, customer service, accounting and distribution. As we move into Q1 of 2013, we plan on integrating these functions one by one, culminating in full commercial integration around the end of Q2 2013. Below are frequently asked questions and answers concerning the acquisition?

1. **I'd like to submit an order for PeriOptix. Can I place that with you?**
2. **I'd like to know the status of my custom loupe order. Can you tell me when I will receive it?**
3. **I have an issue with the PeriOptix loupes/light I just purchased. Can you help me?**
4. **I have a question on my PeriOptix invoice/statement. Can you help me?**
5. **I'm an LSDP member. Can I get PeriOptix products free as part of my benefits?**

PeriOptix offers a full suite of high-quality magnification and illumination products, all at an unbeatable value for the clinician. Since its founding in 1999, PeriOptix has introduced a number of innovations that include a unique modular frame system for loupes, the first portable LED light source, and a proprietary locking mechanism designed to simplify the adjustment of flip up style loupes.

New MicroLine™ Series

Optics are less than 1/3 the size of conventional optics

3.1 TTLs

3.1x TTLs (Through-the-Lens) provide higher magnification

Panoramic Flip-Ups

Adidas sports frames, lighter weight, waterproof, better visibility, more frame choices

Legacy Flip-Ups

Successfully combining performance and value

LED Headlights

Intense, pure-white focused beam that impresses the experts

5. ETCHING & BONDING >> [BondLink](#)

Superior bond strengths when used with metal

BondLink - the coupling agent that makes single-bottle adhesives compatible with self-cure and dual-cure composites. BondLink will make the following systems bond to self/dual-cured composites:

- Clearfil SE Bond
- DenTastic Uno (PulpDent)
- Gluma Comfort Bond + Desensitizer
- Matrixx Cabrio
- One-Up Bond F
- Optibond Solo Plus (Kerr)
- PQ1 (Ultradent)
- Prime & Bond NT (Dentsply)
- Single Bond (3M-ESPE)

Advantages

- Fast, easy application
- No light required

KIT Options

- DISH DAPPEN 1pc
- BRUSH TIP HANDLE
- BRUSH TIP 5 pc
- INSTRUCTIONS

Tenure Quik with Fluoride

Bonds to all surfaces with the added protection of fluoride.

Tenure Uni-Bond

Tenure Multi-Purpose All surface bonding system.

5. ETCHING & BONDING >> Etch 'N' Seal

Buffered, safe porcelain etching

Etch 'N' Seal combines a 25% phosphoric acid with 0.5% aluminum oxalate so you can etch enamel and condition dentin at the same time. The combined use of Etch 'N' Seal and the Tenure Multi-Purpose Bonding System results in the formation of a dentin hybrid layer that can reduce dentin permeability, protect against acid attack and decrease sensitivity.

KIT Options

Product #	Item
030402550	ETCH 'N' SEAL 8pc SYRINGE KIT

Each Kit Contains:

- (8) ETCH'N'SEAL RED SYRINGES 3mL
- SYRINGE TIP PINK 18G 20pc
- RULE OF 55 CHART
- INSTRUCTIONS

Tenure Quik with Fluoride

PorceLock is a buffered hydrofluoric acid, porcelain etching solution that makes exceptionally strong bonds to porcelain.

Tenure Uni-Bond

Tenure Multi-Purpose All surface bonding system.

FAQs

What is the difference between Etchant and Etch 'N' Seal?

Den-Mat Etchant is a 37% phosphoric acid etch. Etch 'N' Seal is a 25% phosphoric acid etch that also contains .5% aluminum oxalate so you can etch enamel and dentin at the same time.

What is the benefit of using Etch 'N' Seal and the Tenure Multi-Purpose Bonding System?

The combined use of these two systems results in the formulation of a dentin hybrid layer that can reduce dentin permeability, protect against acid attack, and decrease sensitivity.

How does Etch 'N' Seal work?

Etch 'N' Seal causes oxalate crystals to form at the opening of the tubules. The bonding agent applied is chemically attracted to the crystals, pulling the bonding agent into the tubules, creating the best bond possible.

5. ETCHING & BONDING >> PorceLock

Buffered, safe porcelain etching

PorceLock is the perfect companion for porcelain and crown and bridge repair. PorceLock is a buffered 2.5% hydrofluoric acid gel that is both safe and effective for intraoral and extraoral use. Its formula contains 2.5% hydrofluoric acid.

PorceLock creates bond strengths three to five times greater than treatments using silane alone. It achieves bond strengths approaching those of etched enamel after a 3-5 minute treatment. For repair of porcelain surfaces, the use of PorceLock and Cerinate Prime with Ultra-Bond allows you to achieve strong and reliable intraoral bonds. PorceLock's gel viscosity and needle tip dispensing allows you to place the gel only where you want it.

KIT Options

Product #	Item
402060	PORCELOCK SYRINGE KIT (3 syringes)

Each Kit Contains:

- PORCELOCK SOL SYRINGE 1.75mL
- SYRINGE TIP PINK 18G/30* 10pc
- RULE OF 55 CHART
- INSTRUCTIONS

Block-Out

A unique formulation for bonding porcelain over dark stained teeth such as tetracycline. Great for thin veneers!

Ultra-Bond Plus Resin Cement

A multi-purpose, dual-cured, resin cement designed specifically for bonding porcelain restorations.

FAQs

What is the primary use of Porcelock?

PorceLock is a porcelain etchant. PorceLock is a buffered 2.5% hydrofluoric acid gel that is safe and effective for intraoral and extraoral use. It is the perfect companion for porcelain crown and bridge repair.

How effective is PorceLock?

Using PorceLock creates bond strengths three to five times greater than treatments using silane alone. It achieves bond strengths approaching those of etched enamel after a 3-5 minute treatment.

My lab work comes back pre-etched from the Cerinate Smile Design Studios. Why would I need Porcelock?

PorceLock is needed in any porcelain repair procedure, and also would be used in re-seating a unit that has de-bonded. PorceLock is also required when bonding porcelain-to-porcelain.

5. ETCHING & BONDING >> Tenure Multi-Purpose

Great products get better and better over time

For almost 20 years, the Tenure Multi-Purpose Bonding System has demonstrated a proven clinical record of successful restorations with high bond strengths and excellent retention, combined with significant reduction of microleakage and post-operative sensitivity. Tenure is the first bonding agent accepted by the American Dental Association and a 4th generation multi-purpose, chemical curing, adhesive system for bonding any resin restorative to all intraoral surfaces.

Tenure A and B multi-purpose, self-cure adhesive bonds to the five intraoral surfaces - enamel, dentin, porcelain, composite and metal.

Tenure S is a single component, light cured, hydrophilic bonding agent that further enhances bonding. When used in combination with Tenure A and B, Tenure S offers even greater bond strengths to intraoral surfaces.

- Bonds all routine direct and indirect resin composites
- Bonds porcelain, ceramic veneers, amalgams, precious and semi-precious metals
- Bonds indirect gold, porcelain, and ceramic inlays and onlays
- Crown prep desensitization prior to impression/temp

- Complete self-cure
- Versatility
- Low film thickness
- Easy flow

- Instruction card

FAQs

What is a bonding agent?

Bonding agents prevent micro-leakage under restorations. They act as an adhesive between the tooth structure and the restorative material for bonding long-lasting restorations.

Why are bond strength and physical properties important?

A bonding agent creates the bond, and the composite material maintains it. The long-term success of the restoration is dependent upon the physical properties of the composite material.

What is the Rule of 55?

The Rule of 55 states that all five surfaces (enamel, dentin, porcelain, metal, and composite) can be bonded in five steps (prep surface, apply bonding agent, select restorative, place restorative, contour/finish/polish).

What are the different types of Tenure and when do I use each?

1. Tenure MPB is a 2 bottle system that requires a separate acid etch. It is recommended as the bonding agent of choice when bonding to enamel, especially during LUMINEERS porcelain veneers placement.
2. Tenure Uni-Bond is also a 2-bottle system. It is an etch-free system (unless bonding to uncut enamel) and is recommended when bonding to dentin. Eliminating the separate acid etch step will decrease chances of sensitivity.
3. Tenure Quik is a one-bottle system containing fluoride. It is recommended to dentists who prefer a one-step, light-cure bonding agent.

What is BondLink used for?

Many competitors' bonding agents do not bond well to self-cured and dual-cured composite materials. BondLink is a coupling agent specifically designed for bonding single bottle bonding agents to self-cured composites.

5. ETCHING & BONDING >> Tenure Quik with Fluoride

Bonds to all surfaces with the added protection of fluoride

Tenure Quik's formulation provides for a surface-penetrating, low viscosity bonding agent. Once applied to etched enamel and dentin, you can be assured that Tenure Quik with Fluoride will completely penetrate and seal the tooth interface. High bond strengths, less steps and simplified placement, combined with the ability to bond to all surfaces and the added protection of fluoride, make this the product to use for composite placement. Tenure Quik with Fluoride is compatible with self-cure, dual-cure and light cure composite restoratives.

- Bonds all routine direct and indirect composites
- Root/dentin desensitization
- Bonds porcelain ceramic veneers, precious and semi-precious metals
- Bonds indirect gold, porcelain, and ceramic inlays and onlays
- Crown prep desensitization prior to impression/temporaries
- Compatible with self-cure, dual-cure and light-cure composite restoratives.
- Fast and easy single component adhesive saves chairtime
- Bonds to all surfaces
- Fluoride release
- High bond strength decreases opportunity for microbial invasion
- Resistant to microleakage, post-operative sensitivity and secondary decay
- Desensitizes dentin

- DISH DAPPEN 2pc
- SYRINGE TIP 18G/6pc
- RULE OF 55 CHART

5. ETCHING & BONDING >> Tenure Uni-Bond

The easy to use-etching bonding agent

Tenure Uni-Bond self-etching bonding system simplifies all direct bonding applications with anterior and posterior composites. It is ideal when cementing crowns and bridges with self and dual-cure resin cements. Tenure Uni-Bond is compatible with self-cure, dual-cure and light-cure composite materials. Gloss-N-Seal is a light-cure, low viscosity, surface penetrating sealant with exceptional abrasion resistance; easily applied to seal the microcracks within the resin and enamel surface on restorations.

- Bonds all routine and indirect resin composites
- Root/dentin desensitization
- Bonds porcelain, ceramic veneers, amalgams and precious and semi-precious prepared metals
- Bonds indirect gold, porcelain, and ceramic inlays and onlays
- No separate etching required
- Bonds to all intraoral surfaces - self-cure, dual-cure, and all composites - even amalgam, precious and semi-precious metals, and porcelain
- High-bond strength
- Less chairtime
- Non-sensitivity formula
- Gloss-N-Seal seals and glosses your final masterpiece

6. IMPRESSIONS >> Precision Cartridges

Precision Cartridges

Precision VPS impression material is available in a convenient 1:1 automix cartridge delivery system. Cartridges are 48 ml each and come with 2 cartridges in a package. Extra Lite and Lite viscosity cartridges include yellow mix tips and intraoral tips for precise and controlled placement of wash material. Medium and Heavy viscosity cartridges come with blue mixing tips.

Key Precision Features

- Moisture displacement actually moves blood and saliva out of the tooth's sulcus capturing minute marginal detail instantaneously.
- Thermally activated set time responds to body heat within the mouth increasing clinician control.
- Delicious Wild Berry flavor reduces gag reflex and patient discomfort.
- High-dimensional stability enables multiple pours and exceptional detail reproduction indefinitely.

KIT Options

Product #	Item
SPD1508	Extra-Lite Body
SPD1509	Lite Body
SPD1510	Monophase/Medium
SPD1511	Heavy Body

6. IMPRESSIONS >> Precision Putty Jars

Precision Putty Jars

Precision Putty Jars are a premium heavy viscosity VPS impression material. Precision Putty offers a firm yet smooth texture to make the mixing of base and catalyst consistent and easy. The Putty material is a deep purple color and pairs well as a tray material with a Lite or Extra Lite wash material. Putty Jars include enough base and catalyst material to make 500 ml of impression material. Putty is Wild Berry flavored and all boxes include mixing spoons.

- Moisture displacement actually moves blood and saliva out of the tooth's sulcus capturing minute marginal detail instantaneously.
- Thermally activated set time responds to body heat within the mouth increasing clinician control.
- Delicious Wild Berry flavor reduces gag reflex and patient discomfort.
- High-dimensional stability enables multiple pours and exceptional detail reproduction indefinitely.

6. IMPRESSIONS >> Precision Putty Paks

Precision putty Paks

Precision putty is a premium heavy viscosity VPS impression material. Putty is a deep purple color and pairs well as a tray material with a Lite or Extra Lite wash material. Putty paks come in individually wrapped quadrant doses which are easy to use, store and dispense. Simply peel back the lid, fold the pak in half squeezing base and catalyst together and begin mixing.

- Moisture displacement actually moves blood and saliva out of the tooth's sulcus capturing minute marginal detail instantaneously.
- Thermally activated set time responds to body heat within the mouth increasing clinician control.
- Delicious Wild Berry flavor reduces gag reflex and patient discomfort.
- High-dimensional stability enables multiple pours and exceptional detail reproduction indefinitely.
- Individually wrapped putty paks are convenient and support operator infection control.

SPD1514	Regular Putty

6. IMPRESSIONS >> Precision FatPaks

Precision FatPaks

Waste not, want not. Our environmentally-friendly bulk delivery, Precision FatPak is for use with any commercially available 5:1 automix machine. Available in an Intro Kit or Refill Kit. Precision FatPak includes a 300 ml base and 62 ml catalyst for 362 ml of impression material.

- Moisture displacement actually moves blood and saliva out of the tooth's sulcus capturing minute marginal detail instantaneously.
- Thermally activated set time responds to body heat within the mouth increasing clinician control.
- Delicious Wild Berry flavor reduces gag reflex and patient discomfort.
- High-dimensional stability enables multiple pours and exceptional detail reproduction indefinitely.
- Less waste for a happy planet.

6. IMPRESSIONS >> Splash Cartridges

Splash VPS impression material is available in a convenient 1:1 automix cartridge delivery system. Cartridges are 48 ml each and come with 2 cartridges in a package. Extra Lite and Lite viscosity cartridges include yellow mix tips and intraoral tips for precise and controlled placement of wash material. Medium and Heavy viscosity cartridges come with blue mixing tips.

Key Splash Features

- 2 set times for any procedure. Super fast Half Time set of 2:45 is ideal for 1-2 unit cases while longer Regular set (5:30) allows more time for full arch or two-step impression techniques.
- Low contact angle guarantees an accurate pour-up for perfect results.
- High tear strength means margins won't rip upon removal from mouth.
- Delicious Wild Berry flavor reduces gag reflex and patient discomfort.
- High-dimensional stability enables multiple pours and exceptional detail reproduction indefinitely.

Splash! Half-Time Putty Jars: Set Time 2:45

Product #	Item
SPD1235	Regular Putty

6. IMPRESSIONS >> Splash Putty Paks

Splash putty is a heavy viscosity super-hydrophilic VPS impression material. Putty is a deep purple color and pairs well as a tray material with a Lite or Extra Lite wash material. Putty paks come in individually wrapped quadrant doses which are easy to use, store and dispense. Simply peel back the lid, fold the pak in half squeezing base and catalyst together and begin mixing.

Key Splash Features

- 2 set times for any procedure. Super fast Half Time set of 2:45 is ideal for 1-2 unit cases while longer Regular set (5:30) allows more time for full arch or two-step impression techniques.
- Low contact angle guarantees an accurate pour-up for perfect results.
- High tear strength means margins won't rip upon removal from mouth.
- Delicious Wild Berry flavor reduces gag reflex and patient discomfort.
- High-dimensional stability enables multiple pours and exceptional detail reproduction indefinitely.

6. IMPRESSIONS >> Gripper

Gripper Super Rigid Bite Trays

The Gripper is an award-winning revolutionary double bite tray which fuses metal and plastic for extreme rigidity. The Gripper is ideal for all VPS impressions applications and its firm plastic construction is ergonomically designed to maximize both patient and clinician comfort. Gripper features soft lined mesh, an easy grip, matte-finish handle for patient identification.

- Hybrid metal and plastic construction makes a super rigid bite trays that prevents any impression distortion.
- Thin high-quality mesh for accurate results.
- Write-on matte-finish handle for easy patient identification.
- Available in a variety of sizes and shapes for all patients and procedures.

6. IMPRESSIONS >> PERFECtray

PERFECtray is our award-winning line of crystal clear high-quality acrylic impression trays. With 9 different options in a variety of sizes and shapes you're sure to find the perfect tray for any procedure. PERFECtrays are super-rigid with ergonomic handles, finger rests and feature small perforations for superior impression material retention.

- Crystal trays are completely transparent allowing full visibility for the clinician.
- High-quality acrylic won't bend or break for distortion-free impressions.
- Ergonomic handles and finger rests allow seamless seating of tray for both patient and clinician.
- Small perforations retain the impression material for an easy removal of tray and material from the mouth.

6. IMPRESSIONS >> Vanilla Bite

Vanilla Bite is a medium-viscosity VPS bite registration material ideal for 1-2 unit cases. Vanilla Bite features a mousse-like consistency and a Shore-A hardness of 90. It is specifically engineered to deliver a dimensionally stable, accurate and rigid bite registration every time and offers a super fast set of 55 seconds. Vanilla Bite is a white material visible under CAD/CAM scan. Delicious vanilla flavor.

- Mousse-like consistency is imperceptible to the patient minimizing any proprioceptive movements which can distort accuracy.
- Delicious Vanilla Flavor minimizes gag reflex and increases patient comfort.
- Quick 55 second set minimizes patient discomfort and chance of distortion.
- High-dimensional stability enables multiple pours and exceptional detail reproduction indefinitely.
- Visible under CAD/CAM scan for all your digital impression needs.

SPD1105	Vanilla Bite (0:55)

6. IMPRESSIONS >> Chocolate Bite

Chocolate Bite is a medium viscosity VPS bite registration material. Chocolate Bite has a set time of 1:30 which allows more time for full arch impressions. Chocolate Bite is also recommended for the Laminar technique. Chocolate Bite features exceptional rigidity and stability and a delicious milk chocolate flavor.

- Mousse-like consistency is imperceptible to the patient minimizing any proprioceptive movements which can distort accuracy.
- Chocolate flavor minimizes gag reflex and increases patient comfort.
- High-dimensional stability enables multiple pours and exceptional detail reproduction indefinitely.
- Longer set time of 1:30 leaves plenty of time to capture full arch impressions.
- Endodontic post-and-core cementations
- Resin or ceramic inlays and onlays

SPD1186	Milk Chocolate (1:30)

6. IMPRESSIONS >> Clear Bite

Clear Bite is a clear, medium-viscosity VPS matrix material ideal for quick and easy provisional fabrications. Clear Bite captures accurate detail while remaining flexible enough to re-insert comfortably back in the mouth. The transparent material makes it easy to identify any voids or bubbles and also allows light to cure through the impression to polymerize flowable composite. Clear Bite is a significantly faster and easier alternative to vacuum formed splints, alginates and hand-mixed putties which are traditionally used for provisional fabrication; Clear Bite drastically shortens the provisional procedure, minimizing chair time and patient discomfort.

- Transparent material provides great visibility and allows light to cure through and polymerize resin.
- Detail-capture of any VPS with additional flexibility for easy matrix reinsertion.
- Refreshing Peppermint flavor minimizes gag reflex and patient discomfort.
- Longer set time of 2:30 allows plenty of time to create full arch matrices.
- Use with self-cure, dual-cure or light-cure provisional materials.
- Quicker and cleaner than traditional fabrication methods for less wasted chair time.

SPD1104	Clear Bite Matrix (2:30)

6. IMPRESSIONS >> Mega Bite

MegaBite

MegaBite is a super-rigid VPS bite registration material which is great for use in CO/CR record-taking. MegaBite features a set time of 55 seconds and affords the clinical optimal viscosity and rigidity for perfect occlusal accuracy in just seconds. MegaBite has a low shrinkage which prevents the material from locking into undercuts during removal preventing inadvertent extractions or fractures. MegaBite provides the clinician with a material as rigid as a Bisacryl without the heat generation, brittleness or high price tag.

- Quick 55 second set time minimizes patient discomfort and chance of distortion.
- Zesty Spearmint flavor reduces gag reflex and increases patient comfort.
- Low shrinkage prevents extractions or fractures when removing set impression.
- Rigid accuracy ensures an exact and durable registration.
- Easy to trim without a rotary instrument for a quick and clean result.

7. RESTORATIVE MATERIALS >> Bio-Cap

Bio-Cap is a single-component, no-mix, light-cure pulp capping material. You can also use it as a liner for sensitivity-free placement of posterior restorations. Bio-Cap has a unique formula that has demonstrated clinical biocompatibility. Bio-Cap is a self-adhesive, dentin bonding, resin ionomer dispensed with handy, disposable needle tips.

Bio-Cap can be cured in 3 seconds with a Sapphire PAC Light, or 10 seconds with an Allegro or other LED curing lights.

Applications

- Pulp capping
- PFM crown and bridge cementation
- Protective base
- Dentin liner
- Pulpotomy

Advantages

- Initiates formation of reparative dentin and bridging materials
- Prevents bacterial penetration, microleakage
- Prevents sensitivity under large direct and indirect restorations
- Contains fluoride
- Insoluble

7. RESTORATIVE MATERIALS >> Core Paste XP

Core Paste XP Syringe has the same strength and excellent handling characteristics of original Core Paste, with over 29 years of clinical success. The auto-mixing syringe is easy to use and creates up to 60% less waste than cartridge systems that require a dispensing gun. The stackable viscosity allows you to build up without a matrix or core form and the dual-cure formula gives you the confidence of a self-cure with the option of light-curing to speed the procedure.

Core Paste XP Syringe is a creamy, radiopaque paste developed specifically for high-strength, reliable, core build-ups. When there is insufficient tooth structure available for a fixed prosthesis, Core Paste XP Syringe provides the added strength and stability needed for long-term clinical success.

Core Paste XP Syringe is available in Enamel and White, and White with Fluoride. Core Paste XP Syringe is also available with fluoride for added protection.

"I have used a few of these other 'highly-rated' popular core materials you see advertised and let me tell you, Core Paste is the best material on the market." -Dr. George Diaz, Long Beach, CA

"Core Paste is in a league of its own for core build-ups!"

Applications

- Core build-ups
- Integral post and core procedures
- Cementation of posts
- Repairing and preventing split roots
- Esthetic posterior restorations

Features

- Dual-cure Formula
- Auto-mixing syringe delivery
- Excellent handling characteristics
- Enamel and White shades
- Radiopaque

Benefits

- Assures complete polymerization in all situations.
- Eliminates hand mixing; less waste than cartridge/gun systems.
- Stackable viscosity and syringes easily; cuts like dentin.
- Enamel shade enhances the esthetics of translucent restorations.

White shade is easily distinguished from tooth structure.

- Easily distinguishable in radiographs.

7. RESTORATIVE MATERIALS >> Core-Post

Prevent tooth stress and fractures

The physical properties of Core-Post are matched with tooth structure and designed to flex with teeth under normal conditions. Eliminate tooth stress and fractures that can occur with standard metal posts. Carbon fiber posts and glass fiber posts available in 5 diameters: 1.0, 1.2, 1.4, 1.7 and 2.0 mm.

Applications

- Single tooth post restoration

Advantages

- Modulus of elasticity similar to dentin
- Exceptional physical properties
- Physiochemical compatibility between, post, cement, dentin, and core
- Easy to use and cut
- Economical
- Radiopaque
- Available in carbon fiber for added posterior strength, or glass fiber for anterior esthetics

7. RESTORATIVE MATERIALS >> Geristore

Multi-use Hybrid with Unsurpassed Biocompatibility, Bond Strength and Versatility

The physical properties of this unique and extremely biocompatible restorative make it the ideal material for countless procedures that you will encounter in your practice. Geristore's dual-cure, hydrophilic Bis-GMA formulation makes it the product of choice for subgingival lesions and restorations involving soft tissue: - histological biocompatibility, adherence to dentin and cementum, release of fluoride, low coefficient of thermal expansion, and low polymerization shrinkage. A clinical evaluation of Geristore as a restorative material for root caries and cervical erosions showed it to be an acceptable material with 100% Alpha rating for retention, surface texture, and post-operative sensitivity. The auto-mix delivery system, with intra-oral tips, makes dispensing and placement fast and easy.

Applications

- Class V restorations
- Cavity lining and base material
- Base material for cervical abrasion and erosion lesions
- Small Class I and Class II restorations
- Root caries lesions
- Cement for metal/PFM restorations
- Pulp capping for mechanical pulp exposure
- Restoring deciduous teeth
- Restoring and sealing overdenture abutments
- Subgingival restorative for fractured roots and resorption lesions
- Retrograde filling and root perforations

Features and Benefits

- Hybrid ionomer composite - Combines best properties of both types of materials
- Self-Adhesive - No need for retentive cavity design. Saves chair time and tooth structure. Speed can help ensure success with pediatric and geriatric patients
- Syringe delivery system - Easy and simple to dispense
- Contains Fluoride - Reduces risk for secondary decay
- Bonds to all surfaces including: enamel, dentin, cementum, precious and non-precious metal, and old set amalgam - eliminates the need for multiple products
- Low polymerization shrinkage and low coefficient of thermal expansion - excellent marginal integrity
- Resistant to marginal leakage and abrasion - longer lasting, durable restorations
- Biocompatible - years of clinically proven safety, especially subgingivally
- Radiopaque - highly distinguishable from tooth structure in radiographs

7. RESTORATIVE MATERIALS >> Gorgeous Temp

Most esthetic provisional material you can use

Gorgeous Temp ushers in the next generation provisional material. This dual-cure, uniquely formulated nano-hybrid composite provides amazing esthetics and great strength. Gorgeous Temp will help you create beautiful temporaries in half the time of other temporary materials.

Applications

- Provisional crowns, bridges and veneers

Advantages

- 4-shade Multi-Shade Kit costs less than one shade in a cartridge-based system
- No dispensing guns
- 60% less mixing waste than cartridge-based systems
- Fluoresces like tooth structure
- Unique nano-hybrid composite formula looks like a final restorative
- Exceptionally strong and wear resistant
- Dual-cure

7. RESTORATIVE MATERIALS >> Virtuoso Flowable

7 out of 10 dental offices are making the change to Virtuoso Flowable

Virtuoso Flowable is ideal for small restorations with difficult access. It is a light-cure, low viscosity, flowable composite that has the best handling characteristics for fast and easy techniques. Its precision needle tip dispensing allows it to flow quickly for precise placement.

Clinical research shows it to have a wear rate equal to amalgam and is self-smoothing for easy finishing and polishing.

Virtuoso Flowable is available in 18 Vita Shades, including B1 for your extra-light requirements, Clear for glazing, plus a universal opaquer.

- Pit & fissure sealant
- Small restorations with difficult accessibility Class III, V, VI
- Repairing margins (including amalgams)
- Filling in or repairing cracks
- Small preventive occlusal restorations; pit and fissure sealant
- Proximal box of Class II restorations
- Blockout of undercuts
- Tunnel prep filling
- Incisal repair
- Filling and adding to provisionals

- Ideal, bubble-free flowable consistency
- Wide shade range
- Excellent color stability
- High compressive strength
- Contains fluoride
- High radiopacity

KIT Options

7. RESTORATIVE MATERIALS >> Virtuoso Sealant

A simple way to get the perfect seal

Virtuoso Sealant combines proven fillers used in flowable composites with a bonding enhancer to improve retention in pits and fissures. With Virtuoso Sealant, there is no need for an intermediate bonding agent. Virtuoso Sealant has two shades, Clear and Opaque.

- Easy to apply
- Proven wear resistance equal to amalgam
- Fluoride release for enhanced decay prevention
- Ideal bubble-free flowable consistency
- Precision needle tip for fast, precise placement
- Opaque & Clear shades for versatility to meet patient and case concerns

7. RESTORATIVE MATERIALS >> Virtuoso Universal

"Shades blend well - I am pleasantly surprised at how nice they look"

Virtuoso Universal offers esthetics, high polishability and optimal handling - all in one formula. The innovative nanofill technology from the clinically proven, award-winning Virtuoso family of Advanced RestoratIVES is a true universal restorative material for anterior and posterior applications.

Virtuoso Universal is worry-free and easily polishes to a tooth-like luster, making it indistinguishable from the tooth for years to come.

Applications

- Restoration of anterior and posterior teeth
- Class I and II restorations
- Direct composite veneers

Advantages

- Exceptional esthetics
- Wear and stain resistant
- Wide shade range

7. RESTORATIVE MATERIALS >> Matrixx

Matrixx Anterior Microfill (AM) is a highly polishable, glossy and translucent material that is ideal for restoring incisal edges, direct veneering, and for overlays. Matrixx Anterior Hybrid (AH) is a sculptable and non-slumping composite that is great for both anterior and posterior restorations. Matrixx Posterior is a highly-filled material with excellent compressive strength and durability designed to simulate and maintain anatomical contours in posterior restorations. Matrixx Flowable composite is your ideal material for the pulpal or axial layer in posterior restorations. Matrixx Flowable is easy to place and stays put, with excellent viscosity. No matter which material you choose, your Matrixx restorations will maintain their form and beauty for years to come

- Extremely sculptable material easily creates natural looking teeth with contoured anatomy.
- Small particle sizes deliver a high gloss and luster for real-life esthetics.
- Minimal shrinkage reduces risk of micro-leakage and maintains marginal activity for dependable restorations year after year.
- Varieties of shades are easy to match to any natural tooth structure.
- Amazing color stability that lasts for years with no shade-shift.

7. RESTORATIVE MATERIALS >> Moxie SE

Moxie SE-Self-Etch Light-Cure Adhesive

Our new Moxie SE is a sixth-generation, self-etch, light-cure adhesive. This third-party tested, clinically proven adhesive truly stacks up against the competition. Its strong, 22 MPa+ bond to both enamel and dentin provides the adhesion that patients and dentists need.

Moxie SE's simple, single-coat application along with unit-dose availability ensure low technique sensitivity. Top off its consistent performance with a signature acetone-free and solvent-free formula, which prevents over-drying of dentin, and you have an adhesive that you'll want to stick with for years to come.

Indications for Use:

- Direct and Indirect Composite Bonding
- Porcelain, Ceramic, and Composite Repairs

Moxie Self-Etch Bottle Kit CR1184 contains:

- One 5-mL bottle of Moxie SE Primer
- One 5-mL bottle of Moxie SE Bond
- 50 black microbrushes

- 50 yellow microbrushes
- Step-by-Step Instruction Card
- Directions for Use

7. RESTORATIVE MATERIALS >> Moxie TE

Moxie TE - Total-Etch Light-Cure Adhesive

Our new Moxie TE is a fifth-generation, one component, light-cure total-etch adhesive. This third-party tested, clinically proven adhesive truly stacks up against the competition. Its strong, 24 MPa+ bond to both enamel and dentin provides the adhesion that patients and dentists need. Moxie TE's simple, single-coat application along with unit-dose availability ensure low technique sensitivity. Top off its consistent performance with a signature acetone-free and solvent-free formula, which prevents over-drying of dentin, and you have an adhesive that you'll want to stick with for years to come.

Indications for Use:

- Moxie TE is intended for use with a phosphoric-based acid-based etching gel.
- Direct and Indirect Composite Bonding
- Porcelain, Ceramic, and Composite Repairs

Moxie Total-Etch Bottle Kit CR1186 contains:

- One 5 ml. bottle of Moxie TE Bond
- One Dappan Dish
- 25 microbrushes
- Directions for Use

Moxie Total-Etch Unit Dose Kit CR1187 contains:

- 48 (0.12 ml.) Unit Dose Applications Moxie TE Bond (0.12 mL each)
- One 2-mL syringe 37% acid etchant
- Directions for Use

 - 50 ml 4:1 automix cartridge provides up to 100 units of material
- Shelf Life: 24 mos. from manufacture

7. RESTORATIVE MATERIALS >> Nuance

Nuance - Subtle Made Simple

Nuance is a new, light-cured composite, which simplifies the composite restoration process like never before:

- It's translucent when thin and opaque when thick
- One body shade can be used for the entire restoration with flawless, natural-looking results.

You save time and money, and give the patient a beautiful looking tooth that you can both be proud of.

Nuance has a pliable, buttery consistency that extrudes effortlessly and is easy to spread and shape without sticking to the composite instrument, and is available in a universal, posterior & flowable.

Nuance composite focuses on providing a simple approach to achieving natural-looking aesthetic results. Nuance contains proprietary multi-faceted fillers which both reflect and refract light, mimicking the opacity, translucency and optical characteristics of tooth structure.

Therefore, in thinner areas, such as the incisal edge, it appears translucent, while on the main tooth body it absorbs and refracts light creating a dentin-like depth. Its chameleon-like quality makes it an accurate shade match, every time.

Additionally, Nuance contains sub-micron filler particles to ensure optimal strength and wear-resistance for posterior teeth and superior polishability for anterior teeth, making it a truly universal composite.

8. DUO:PCH

Duo:PCH Gives More Patients the Choice of a New Smile

Not every patient can afford veneers, especially in today's economy. Until now, there hasn't been a more affordable solution that you can stand behind clinically.

Duo:PCH Porcelain Composite Hybrid is an entirely new esthetics category, combining the convenience of a composite build-up with the finishing beauty of Cerinate® porcelain.

- Customize the porcelain shells.
- Place the composite build-up.
- Seat the porcelain shells.

You'll create beautiful, long-lasting and stain-resistant porcelain finishes. Now, Duo:PCH gives more patients than ever a chance at a beautiful new smile.

- The only anterior direct restoration system with porcelain facing providing improved esthetics, longevity, and easier finishing
 - A new, affordable option and less costly than lab-fabricated veneers
 - No need to layer composite “free-hand”
 - No lab fees
-
- Affordable smile makeover in 1 – 2 office visits
 - Minimal removal of sensitive tooth structure for greater comfort
 - Beautiful, long-lasting esthetics that won't stain or wear over time

Clinical Application

- Reshape misaligned, awkward or crooked teeth
- Level out uneven teeth
- Close gaps
- Revitalize old crowns and bridgework
- Fix chipped teeth
- Permanently whiten stained or dark teeth

In a few single steps, you'll achieve beautiful results with Duo:PCH

The Next Evolution in Anterior Direct Restoration Finishing

Strength and beauty of Porcelain

The Duo:PCH system features preformed porcelain shells with an underlay of composite, designed to mimic the luster, smoothness, translucency and shade characteristics of real enamel and dentin. Porcelain finishing provides better resistance to staining and chipping and does not need to be polished or maintained like composite, providing a beautiful, lasting solution at an affordable price.

- More natural and lustrous than composite

- Strong (195 MPa) and easy to customize with hand piece
- Requires less polishing over time
- Pre-etched for efficient placement

Duo:PCH composite cement is specifically formulated for the porcelain composite hybrid technique. Its thick viscosity and light cure properties allows for efficient working time and enhanced build-up support without drift. Available in multiple shades: OM1, A1/B1, A2/B2, A3.5 to blend with underlying dentition.

Duo:PCH is the next evolution in anterior direct restoration finishing, addressing the deficiencies of composite bonding while incorporating the esthetic qualities and longevity of porcelain material.

Duo:PCH Porcelain Shell Refills

Available in 4-packs in each tooth type with the following sizes: Uppers (XS, S, M, L, XL) and
Lowers (S, M)

9. LUMIBRITE (Whitening) >> Lumibrite Chairside

When your patients are ready for whiter smiles immediately, be ready with LUMIBRITE Chairside Whitening

Fast. Convenient. Effective.

The LUMIBRITE Chairside Whitening System is ideal for fast, effective and gentle whitening with minimal sensitivity.

Brighter, More Beautiful Smiles ... Fast

When combined with the Sapphire Supreme Plasma Arc Curing and Whitening Light, the system is clinically proven to whiten teeth in under an hour without the use of harmful UV rays. LUMIBRITE Desensitizing Gel shields against whitening sensitivity. The kit includes three LUMIBRITE Home Whitening Gel syringes, custom mouthguard resin sheets, and a case.

You've also got the choice of whitening without the light and still getting great results.

KIT Options

LUMIBRITE Professional Chairside Whitening

Product #	Item
035359155	Professional Whitening US
035359159	Professional Whitening CN

Each Kit Contains:

- 1 Dual Barrel Whitening Syringe (one patient)
- DESENSITIZING SYRINGE
- PAINT ON DENTAL DAM SYRINGE
- LIP MOISTURIZER
- MINI BRUSH APPLICATOR BLUE
- SYRINGE TIP 18G
- LIP EXPANDERS
- 2 RESIN SHEETS

9. LUMIBRITE (Whitening) >> LUMIBRITE Take Home

LUMIBRITE Take Home Whitening - 3 minutes per day is all it takes!

Other systems require 30 minutes a day, while LUMIBRITE Take-Home is proven to whiten smiles up to 9 shades with only 3 minutes of wear a day for 2 weeks — that's a total treatment time of only 42 minutes!

LUMIBRITE is synonymous with sensitivity-free

You can rely on the LUMIBRITE name to deliver quick results without sensitivity. In a recent clinical study no patient complained of whitening sensitivity — researchers were amazed!

Patient compliance is a breeze

With the 3-minute wear-time patients will be able to quickly and easily whiten their teeth. Choose either 16%, 22% or 32% concentrations in mint or fruit flavors to meet the specific needs and preferences of your patients.

Universal appeal

Quick, convenient and sensitivity-free LUMIBRITE Take-Home is a pleasant option for your regular recall patients and those with LUMINEERS or veneers. At-home whitening systems are proven to effect a color change on tooth structure underlying veneers¹, making LUMIBRITE Take-Home the optimum choice for any patient.

10. PORCELAIN BONDING >> Block-Out

For bonding and masking tetracycline and dark stained teeth

Block-Out by Ultra-Bond Plus is a multi-purpose, dual-cure cement designed specifically for bonding porcelain restorations. The formula was developed based on the successful advanced resin technology of Ultra-Bond Plus but includes a masking agent to successfully block-out staining on teeth. When you need a 3+ shade shift, this is the product of choice.

BLOCK-OUT is available in four bleaching shades: Supreme White, B0, B1, A1. The complete shade range provides a proven resin cement for any restorative need.

10. PORCELAIN BONDING >> Cerinate Shade Modification System II

Prevent shade remakes - saving time and money!

When placing LUMINEERS, you can be assured of a perfect match to adjacent teeth or existing restorations when you use the Cerinate Shade Modification System II. The Cerinate Shade Modification System II is the only resin color modifier and opaquer system available that allows for total color, translucency and opacity control of porcelain and composite restorations. By using these shade modifiers, you can be assured of success when you need to enhance your porcelain veneers and composites to create a polychromatic appearance to your restorations.

The Cerinate Shade Modification System II can be used alone or mixed with a light-cure composite resin or resin cement to modify a tint. The tints can be successfully layered. Tooth discolorations are easily masked with the light-cure or dual-cure, patented, masking agent TetraPaque (included in the kit).

In studies, TetraPaque has been shown to have the maximum opacity with minimal thickness to cover dark stains, tetracycline discoloration, white spots, fluorosis and endodontic staining.

When a dual-cured material is needed, as with crowns and inlay/onlays, the dual-cure initiator is mixed with the light-curing component. Its unlimited depth of cure assures complete curing.

- Color matching with bonded porcelain
- Masking tooth discolorations using the technology of TetraPaque
- Custom tinting of composites
- Custom tinting of temporary restorations

10. PORCELAIN BONDING >> LUMINEERS Placement Kit

A perfect match with LUMINEERS, everything you need at your fingertips.

The Cerinate LUMINEERS Placement System has everything you need to place Cerinate LUMINEERS. This kit eliminates a cabinet of four to six different kits for your LUMINEERS placement. No more trying to remember everything you need and having it ready at chairside. In a convenient, ergonomically designed package the Placement System takes you through:

- Impressions
- Shade verification + adjusting
- Bonding systems
- Finishing

In most cases, without any tooth modification you can make an accurate impression with First Impression and send it off to the Cerinate Design Studios to make your patient's LUMINEERS. With Ultra-Bond Try-In Paste, you can decide with your patient the final shade for that new LUMINEERS smile. Once you have decided, everything is at chairside right at your fingertips for LUMINEERS placement. Pretreatment of your LUMINEERS with Porcelain Conditioner, Cerinate Prime and Tenure S is quick and easy. The teeth to be bonded can then be etched and bonded with clinically proven Etch 'N' Seal and Tenure MP (Tenure A and B, Tenure S Dab Eze). You are now ready to place that new LUMINEERS smile with Ultra-Bond Plus. For those cases where you want to create a polychromatic result, the Cerinate Shade Modifiers are key. When you need to mask discolorations, the clinician's choice is TetraPaque. In one thin application it can mask even the darkest tooth discolorations and stains. Once the LUMINEERS are in place, finishing and polishing is easy using the CeriSaw, CeriSander and the LUMINEERS finishing diamond burs.

It is that simple and easy in one convenient, ergonomic kit. Using the 5-year warranty LUMINEERS Placement System assures you of the LUMINEERS guarantee. Why would you use anything else?

10. PORCELAIN BONDING >> Revitalize kit

Rejuvenate old crown and bridgework - without removing them

Finally, a solution to the problem of esthetically unattractive crowns and bridges! The new Revitalize Supplemental Kit has been designed to enable you to place LUMINEERS over clinically adequate crowns and bridges that are no longer attractive to your patients.

This kit contains all the supplemental materials necessary to accompany your Ultra-Bond kit for bonding to metal, porcelain and composite resin. Its proven chemistry for crown and bridge repair and resurfacing will allow you to bring new vitality to existing restorations.

In the past, patients thought "not yet, it doesn't look bad enough" because they remember the painful process of placing crowns and bridges. Your patients can renew their appearance painlessly with the Revitalize Supplemental Kit, combined with clinically proven Ultra-Bond and LUMINEERS.

Why LUMINEERS and Revitalize benefit your patients:

- A new, esthetically attractive smile
- No pain - no anesthetics or removal of old restoration work
- Maximum bonding strength - LUMINEERS are proven to last over 20 years when placed with Ultra-Bond
- Less chairtime - saves time and anxiety

Why LUMINEERS and Revitalize benefit dentists:

- Backed by a 5-year warranty
- No pain increases patient acceptance
- Proven to last over 20 years
- Less chairtime saves you time and money
- Easy to use products to supplement your LUMINEERS product inventory

Revitalize Supplemental Kit

10. PORCELAIN BONDING >> Ultra-Bond Plus Resin Cement

The only dual-cured, restorative porcelain cement proven to last for 20 years

Ultra-Bond Plus is a multi-purpose, dual-cured, ADA Type II restorative, as well as a cement. Ultra-Bond was custom designed to match the physical properties of Cerinate Porcelain and tooth structure for long lasting restorations. Ultra-Bond is backed by a long-term clinical study with LUMINEERS made of Cerinate Porcelain and Tenure adhesives that display low marginal stain penetration as well as a 100% retention with no debondings for over 20 years.

Ultra-Bond Plus is available in auto-mixing dual cartridge syringes (also available in powder/liquid formulations) in the following shades: A1, B1, B0, Supreme White and Neutral. An economic multi-shade kit is available as well as individual refill kits. Use Ultra-Bond Plus Try-In Paste to accurately simulate the final shade.

- Cementation of porcelain LUMINEERS
- Porcelain inlays/onlays
- Full porcelain crowns

- Helps prevent marginal staining and pop-offs; makes porcelain veneer restorations stronger and more durable
- Long lasting, durable restorations
- Ideal cementing/luting medium for crowns and veneers
- Protects against wash-out
- Eliminates cracking or crazing of porcelain
- Exceptional ease of use; allows for placing multiple restorations at one time with just one mix
- Easily distinguished from tooth structure in radiographs

11. CEMENTS >> Infinity

A crown cemented with Infinity is there to stay.

Infinity cement is a self-adhesive, all-purpose cement that fulfills the properties necessary for cementation of porcelain-metal, zirconium, all ceramic, resin and ceramic inlay/onlays, cast metal and all types of posts. The self-adhesive formula syringes easily into place avoiding placement sensitivity by sealing dentin tubules, thus preventing post-operative sensitivity. You will get non-microleaking, stress-resistant margins every time. That's why thousands of dentists make it their #1 choice in resin cement.

Applications

- All-porcelain crown and bridge cementation
- PFM crown and bridge cementation
- Amalgam cementation
- Fluoride-releasing base/liner
- Maryland bridge cementation
- Endodontic post-and-core cementations
- Resin or ceramic inlays and onlays

Advantages

- All-purpose cement for all clinical applications
- Insoluble, non-microleaking margins
- Dual-cure
- Prevents post-operative sensitivity
- Self-adhesive, no bonding agent required in most instances
- Auto-mixing syringe delivery system
- Fracture resistant
- Low film thickness
- Cleans-up in seconds
- Clinically successful, long-lasting bond

1399	CERINATE-PRIME 15ml W/PORCELAIN CONDITIONER 6g
1002A	PORCELAIN CONDITIONER 6GM

FAQs

What is the purpose of Porcelain Conditioner?

Porcelain Conditioner is a citric acid used as a pre-treatment to activate and hydrolyze the Cerinate Prime. It also removes dust and cleans pre-etched LUMINEERS to prepare them for bonding. It is not a porcelain etchant, which is a common misconception.

What is the purpose of Cerinate Prime?

Cerinate Prime is an organosilane ceramic primer, which creates the chemical bond between the LUMINEERS and the Ultra-Bond.

Can either of these steps be eliminated?

No! Both the Porcelain Conditioner and Cerinate Prime are essential steps in the LUMINEERS placement procedure. Eliminating either of the steps would result in bond failure.

13. EQUIPMENT, INSTRUMENTS & ACCESSORIES >> Finishing Kit

LUMINEERS Finishing Kit

The perfect way to finish LUMINEERS This finishing system is specially designed for LUMINEERS placement. However, it's a great set of tools for any laminate placement. This all-inclusive kit makes finishing quicker and much smoother than tools on the market today. Each tool is specifically designed to finish the laminate surface and interproximals without causing the patient pain or damaging the laminates. You'll wonder why you've lived without this system for so long.

KIT Options

Product #	Item
033897100	LUMINEERS Finishing Kit

Each Kit Contains:

- LUMINEERS Diamond and Bur Block
- Schure 349 Instrument
- Porcelain Laminate Polishing Paste sy 5g
- CeriSaw and CeriSander handles 1ea
- CeriSaw Anterior blades 10 pc
- CeriSander fine strips 6 pc
- CeriSander ultra-fine strips 6 pc
- Syringe Tips 18G/10 pc

FAQs

I already have diamonds and finishing burs. Why should I purchase the LUMINEERS Finishing Kit?

The LUMINEERS Finishing Kit is an all-inclusive kit that makes finishing quicker and much smoother than tools on the market today. Each tool is specifically designed to finish the laminate surface and interproximals without causing the patient pain or damaging the laminates. You'll wonder why you've lived without this system for so long!

What else can the LUMINEERS Finishing Kit be used for?

This finishing system is specially designed for LUMINEERS placement, however, it's great for any laminate placement. It also can be used for interproximal finishing of composite placements, separating fused contacts, removing and reducing amalgam overhangs, as well as orthodontic stripping of teeth.

What is a Schure 349?

The Schure 349 is an instrument for removing excess resin cement. This instrument is a 'must have' because it will not harm or scratch the surface of the porcelain!

What is the difference between the CeriSaw and the CeriSander?

The CeriSaw is used for interproximal finishing of multiple laminates and separating fused composite restorations. Its exceptionally thin, sharp saw blades can easily cut through composite without concern for cutting porcelain. The CeriSander is a single-sided, diamond coated strip in fine and ultra-fine textures. The CeriSander is for final finishing and smoothing of the interproximal.

13. EQUIPMENT, INSTRUMENTS & ACCESSORIES >> LUMIGrip

LUMIGrip makes placing LUMINEERS and porcelain restorations simple!

The gentle way to place LUMINEERS, or any veneer, with ease and confidence! The sleek LUMIGrip is an ergonomically designed, fully autoclavable, anodized aluminum hand-piece that maximizes suction forces from standard saliva ejector and HVE lines in order to securely and delicately assist in the stress-free and precise placement of "contact lens-thin" LUMINEERS. Held like a pen, the powerful suction force directed through the soft, baffled, silicone cup securely grips the veneer, enabling precise placement. An effortless and slight retraction of the index finger against the rotary valve on the body of the hand-piece is all that is needed to turn off the suction and release the LUMINEERS.
